

Self-Instructional (SI) Courses to Be Updated – February 2, 2011

There was a call on February 2, 2011, with the NTSAP Workgroup to discuss the responses to the Nov 29 e-mail to the Training Committee that solicited input on which SI courses to update. Based on that call, we came up with a recommendation to update the following SI classes:

SI 476B (and APTI 474)- Continuous emissions monitoring systems

SI 460 - Introduction to Permitting

SI 446 - Air Pollution Source Inspection

SI 417 - Controlling VOC Emissions from Leaking Process Equipment

SI 445 - Introduction to Baseline Source Inspection Techniques

SI 428 - Introduction to Boiler Operations

(Note, we are recommending to do one classroom course - APTI 474 – in addition to the SI classes.)

Two additional SI classes may also be updated:

SI 434 - Introduction to Ambient Air Monitoring (will be done, if expertise is available on NCOA staff)

SI 410 - Introduction to Dispersion Modeling (will be done, if expertise is available on NCOA staff and after first coordinating with EPA's update to SI 409 - Basic Air Pollution Meteorology)

In addition, EPA will work with their existing contractor (EM Assist) to develop the format to be used for course updates.
