

Sensors and Smart Cities - An EPA Perspective

NACAA

5/21/2018

Kristen Benedict

Office of Air Quality Planning & Standards

U.S. Environmental Protection Agency

Clayton Christensen coined the term in "The Innovator's Dilemma"^{1,2}

- Lacks refinement
- Often has performance problems because it is new
- Appeals to a limited audience and may not yet have a proven practical application

Proliferation of Sensors & Real-time Data

21st Century 'Canary in a Coal Mine'

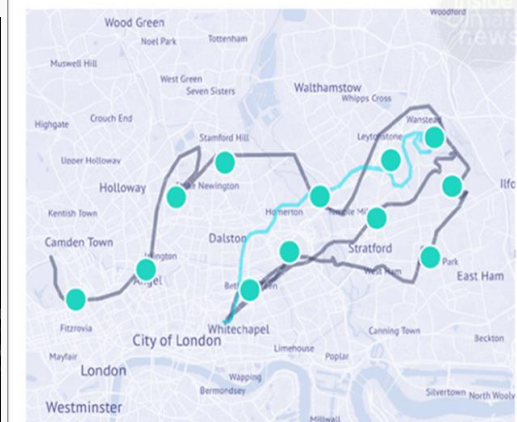

The Pigeon Air Patrol — a joint project by tech companies Plume Labs and DigitasLBI — released pigeons outfitted with air-monitoring packs to record and report real-time air pollution levels in London. This three-day venture was used to spread awareness on London's smog problem.

WHAT IT IS
Racing pigeons wear a small fabric vest outfitted with a feather-light backpack.

One pigeon wore a GPS device instead of an air monitor.

HOW IT WORKED
Londoners Tweeted their location to a Pigeon Air team member and received real-time results (via Twitter) of air quality in their area.

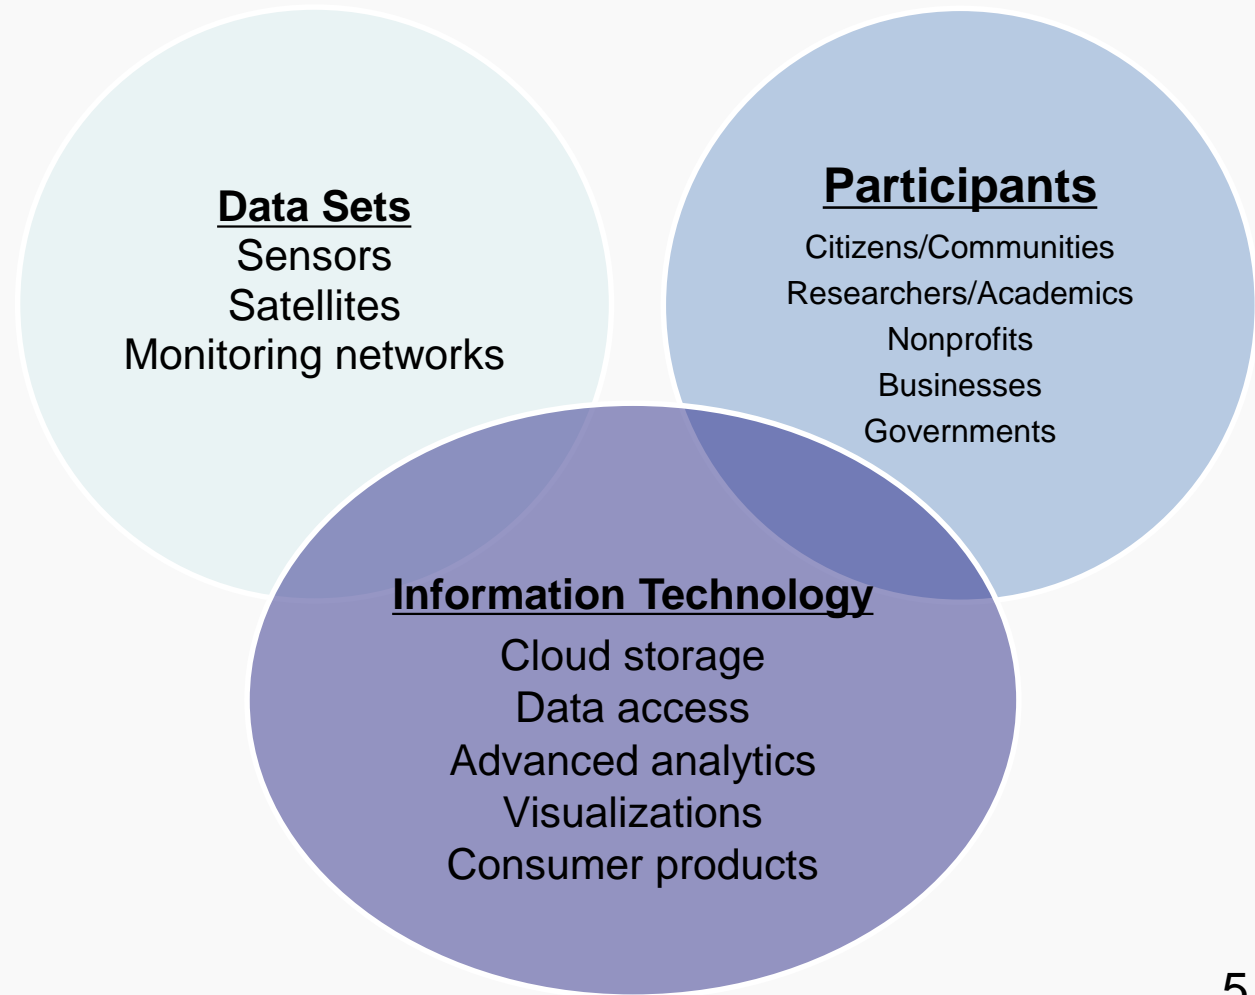

Collection of Air Data

Air Quality - Traditional Government Role

Air Quality – Complex Current State

Advancing Sensors

Where can EPA have an impact in this space?

Advancing Sensors

1. Data Quality
2. Data Interpretation
3. Data Management

(Select) Sensor Data Quality Questions

1. What are the necessary measurement parameters, targets, ranges, and bounds for various end applications?
 - How do these vary by pollutant?
2. Duration of measurement for various end uses?
 - Indicative vs. continuous
3. Sensor performance characterization
 - Initial vs. ongoing requirements?
4. Consideration of non-traditional ways of accomplishing measurement goals
 - Example: Algorithm pre-calibration techniques

Announcing the “Deliberating Performance Targets for Air Quality Sensors” Workshop

June 25 and 26, 2018

EPA Research Triangle Park Campus in Durham, NC

Registration is now OPEN

[Register to attend \(in-person or webinar\)](#)

Register via the Air Sensor Toolbox website: <https://www.epa.gov/air-sensor-toolbox>

Data Interpretation

Current Conditions	
Air Quality Index (AQI) observed at 14:00 EDT <div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">46</div> Good Health Message: None <small>Note: Values above 500 are considered Beyond the AQI. Follow recommendations for the Hazardous category. Additional information on reducing exposure to extremely high levels of particle pollution is available here.</small>	
AQI - Pollutant Details	
Ozone	<div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">46</div> Good
Particles (PM10)	<div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">14</div> Good
Particles (PM2.5)	<div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">38</div> Good
Air Quality Forecast	
Today	Tomorrow
Air Quality Index (AQI) <div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">45</div> Good Health Message: None	Air Quality Index (AQI) <div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">48</div> Good Health Message: None
AQI - Pollutant Details	
Ozone <div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">45</div> Good	Ozone <div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">48</div> Good
Particles (PM2.5) <div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">30</div> Good	Particles (PM2.5) <div style="text-align: center; font-size: 24pt; font-weight: bold; color: green;">47</div> Good

On Thu Mar 15 2018 15:29:23 GMT-0400 (Eastern Daylight Time)
Short-term PM2.5 is LOW at 15µg/m3
 Enjoy your activities.

Short-term AQI **Oak Grove, NC**
57 Moderate

Good
Moderate
Warning
Unhealthy
Very Unhealthy
Hazardous

51-100: Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a very small number of people who are unusually sensitive to air pollution.

Trends | Particles | Sensor | **Current Weather**

Channel A Running Averages

Real Time	Short-term	30 minute	1 hour	6 hour	24 hour	One week
57	56	54	51	31	33	43
15µg/m3	15µg/m3	14µg/m3	12µg/m3	8µg/m3	8µg/m3	10µg/m3

Channel B Running Averages

Real Time	Short-term	30 minute	1 hour	6 hour	24 hour	One week
59	58	56	52	33	34	45
16µg/m3	15µg/m3	14µg/m3	13µg/m3	8µg/m3	8µg/m3	11µg/m3

Excellent Confidence **95%** * **Laser Temperature: 75°F** * **Laser Humidity: 16%**
* Approximate conditions the laser is exposed to. Readings are affected by the electronics, sunlight or wind. Temperature may be elevated and humidity under estimated.

Type street address

Moderate air quality
 BreezoMeter AQI
 0 to 100

CO NO₂ **O₃** PM₁₀ PM_{2.5} SO₂

O₃ | 53.79 ppb **Dominant**

Indoor
 You don't have to stay inside, but it's recommended that you keep tracking the air quality

Current Conditions in Durham, NC ~3:30pm on 3/15/18

Data Interpretation Considerations

- Current state of monitoring **and** health science
- Interpretation varies by pollutant
- Displaying variable datasets & use of “stoplight” colors

Data Management – Current State

Data Management Questions

1. Ownership - Who owns the data?
2. Standardized formats and exchange
 - Facilitation of data from different devices
3. Security – FedRAMP approval?
4. Privacy – Tracking individuals
5. Fusion – How are different data sets being merged together?
6. Algorithms/Assumptions/Models – What adjustments are being made on raw measurements, are the corrections ‘proprietary’?
